Investigating Exothermic Reactions at the Molecular Level – Hydrogen Peroxide

Question 1:

a) Explain what is meant by the term *exothermic* chemical reaction:

.....
.....

b) For an *exothermic* chemical reaction, the energy change is: Positive Negative

Question 2:

a) Explain what is meant by the term *endothermic* chemical reaction:

.....
.....

b) For an *endothermic* chemical reaction, the energy change is: Positive Negative

Question 3:

During a chemical reaction, existing chemical bonds are *broken* and new chemical bonds are *formed*.

a) Bond breaking is: Exothermic Endothermic

b) Bond formation is: Exothermic Endothermic

Question 4:

The following word equation describes the decomposition of hydrogen peroxide into oxygen and water:

Write the balanced chemical equation for this reaction, including state symbols:

.....

Question 5:

For the decomposition of hydrogen peroxide into oxygen and water, $\Delta H = -196.4 \text{ kJ}$.

a) What is meant by the term ΔH ?

.....

b) What is the significance of the value -196.4 kJ ?

.....

Question 6:

Using the molecular modelling kits that have been provided, apply your knowledge bonding to construct molecular models of hydrogen peroxide. Now *react* the molecular models together to form oxygen and water. In the space provided below, use words and diagrams to explain the process that you went through to convert the molecular models of hydrogen peroxide into the molecular models of oxygen and water. Try to capture as many of your thoughts, ideas and questions as possible:

Question 7:

Refer to the energy level diagram given on the right. Use the following average bond energies to calculate values for ΔH_1 , ΔH_2 , ΔH_3 and ΔH_4 and hence the overall energy change for the reaction:

ΔH_r . You may wish to refer to the molecular models and notes that you made in answer to **Question 6** to help you visualise exactly what ΔH_1 , ΔH_2 , ΔH_3 and ΔH_4 represent.

O–H = 463 kJ/mol

O–O = 146 kJ/mol

O=O = 496 kJ/mol

With reference to bond breaking and bond formation, rationalise why the decomposition of hydrogen peroxide into water and oxygen is an *exothermic* reaction.
